

POWER BI SUPERSTORE SALES & PROFIT ANALYSIS

Data Visualization and Storytelling Project

Tool	Microsoft Power BI Desktop
Dataset	Sample Superstore workbook (Orders, People, Returns)
Business question	How can we improve sales and profitability?
Deliverable	Five-page visual report and project documentation

Prepared as a portfolio-style data analytics project

1. Project Overview

This project uses the Sample Superstore dataset to explore sales, profit, order volume, product performance, regional results, and returned orders. The report presents the analysis as a visual story, moving from overall business context to evidence and practical recommendations.

2. Objectives

- Build clear business-focused visualizations in Power BI.
- Identify sales and profitability patterns over time.
- Compare categories, sub-categories, regions, and states.
- Review returned-order patterns and develop recommendations.

3. Tools & Dataset

Tool: Microsoft Power BI Desktop

Dataset: Sample Superstore Excel workbook, using Orders, People, and Returns tables.

Key fields: Order Date, Sales, Profit, Quantity, Discount, Category, Sub-Category, Region, State/Province, and Order ID.

4. Report Structure

Page	Contents	Story purpose
1. Business Overview	Sales, profit, orders, quantity KPIs; monthly trends	Establish performance context
2. Category Analysis	Sales/profit by category; profit by sub-category	Identify product drivers
3. Regional Analysis	Regional sales/profit; top 10 states by profit	Compare geographic results
4. Returns Analysis	Returned-order KPI and orders by region	Review return patterns
5. Recommendations	Action points and conclusion	Turn evidence into action

5. Key Insights

- Technology has the highest sales among the three categories in the displayed report.
- Technology leads category-level profit, while Furniture contributes comparatively less profit.
- Profit varies across sub-categories, indicating areas for closer review.
- Regional sales and profit differ; West and East appear among stronger regions in the displayed visuals.
- Returned orders appear broadly similar across the four regions in the displayed chart.

Note: These insights reflect the visuals created for this report. Validate exact figures and detailed conclusions against the final Power BI file before publication.

6. Business Recommendations

1. Maintain focus on strong-performing categories while monitoring margins.
2. Review pricing, discounts, and costs in low- or negative-profit sub-categories.
3. Compare regional sales with profitability to identify where targeted improvements may help.
4. Monitor return patterns over time and investigate unusual changes.
5. Evaluate discount effectiveness to ensure promotions support profitable growth.

7. How to Use / Reproduce

1. Open the Power BI Desktop (.pbix) report, if included.
2. If prompted, reconnect or update the source path to the Sample Superstore Excel workbook.
3. Refresh the data, then navigate through the five report pages.
4. Review the visuals, takeaways, and recommendations.

8. Suggested GitHub Files

- PowerBI_Superstore_Sales_Profit_Analysis.pdf — exported report.
- README.md — repository landing page (copy this document's project summary into it).
- PowerBI_Superstore_Sales_Profit_Analysis.pbix — optional editable report, if upload size permits.
- Dataset — include only if sharing is permitted; otherwise state the dataset name/source.

9. Conclusion

This project demonstrates how structured data can be turned into a concise business narrative. Reviewing overall performance, product mix, regional outcomes, and returns helps prioritize profitable growth and investigate areas needing improvement.
